WESTERN AUSTRALIAN SECTOR   FRIDAY, 22nd JUNE´51.

LESSON:- MISS P. NAGEL

-ANSWER TO LESSON SET JUNE 8Th

G. M. T.
Noon
8th. June '51.

ANSWER 1.

-ASPECTS CHARTED-

Students will note that the Planets are listed in their actual positions in the respective Constellations.

That is to say that Mercury appears in Taurus at 28.30 but her actual position in the Zodiac commencing from the Constellation Aries is 58.30. Mars is actually 72.33 and so on.

By referring to Mr. Hick's lesson of May 25Th students will note that Planets

are listed in their total number of degrees and minutes according to their positions in the Zodiac.
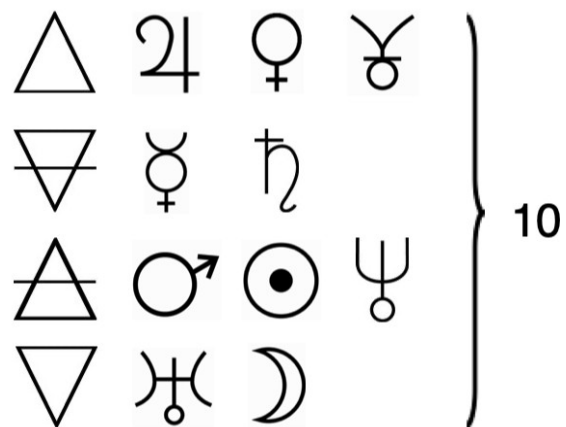

Either method is correct

Note: With regard to the above table listed by Miss Nagel, students will note a slight difference between this and Mr. Hick´s table (refer Lesson, May 25th).

Mr. Hick advised to list across the top of the page, the Planets in their order of appearance on the Zodiacal Chart, and then to list down the side, the Planets in their order of Velocity.

Miss Nagel advises to list Planets in their order of Velocity both across the top and down the side. By adopting this method the student calculates all the aspects of the Planets in their respective order. E.G. Section 1. All the aspects of the Moon. Section 2.All aspects of Mercury and so on throughout the table.

However, this is purely optional for both methods are correct and give the same answer in the final listing.
